

It is estimated that the United States has 27 percent of the world's coal and 3 percent of the world's natural gas reserves. Do you agree or disagree that using domestic resources such as coal and natural gas is important for national energy security? Would you say you...

A process known as 'hydraulic fracturing' or 'fracking' involves injecting liquids - mostly water - and sand into the ground to extract natural gas. Increased use of the technique has resulted in a significant drop in the price of natural gas. However, many people have claimed that fracking is linked to contaminated water supplies while others point out that there are no CONCLUSIVE scientific studies linking fracking to water contamination. Do you support or oppose states banning the use of fracking to extract natural gas? Would you say you...

Coal currently provides roughly one-third of our nation's electricity. The U.S. Environmental Protection Agency has proposed carbon limits for new coal power plants that are, in effect, expected to prevent the construction of any new coal power plants. There are estimates that these rules will drive up the cost of electricity from coal, raising the cost for electricity to some households by as much as \$1,100 per household annually. Knowing this, do you support or oppose the EPA's carbon limit rules? Would you say you...
